

Oyster360

From experience to intelligence — for commercial oyster mushroom farms.

Oyster360 is a multi-tenant SaaS platform that digitizes the entire oyster mushroom operation — batches, rooms, strains, substrate recipes, environment records, inventory, purchasing, harvest grading and revenue — and layers AI decision support on each farm's own data. Farms move from notebooks and guesswork to consistent, data-driven production.

Why farms choose Oyster360

- **+15–25% yield per bag** — data-driven strain, recipe and climate decisions lift output from 650–750 g to 780–850 g.
- **50–60% fewer contamination losses** — AI image inspection catches problems early, cutting losses from 15–25% to 6–10%.
- **Instant answers** — the AI cultivation assistant is grounded in live farm data and the farm's own documents (RAG).
- **3× operational scale** — one manager oversees 15,000+ bags instead of 5,000.
- **Faster onboarding** — standardized workflows and AI guidance make new staff productive in 2–4 weeks.

Built-in intelligence

Cultivation Assistant. Natural-language advice grounded in batch, environment and growth data; multi-LLM with a reliable rule-based fallback.

Knowledge RAG. Upload SOPs and notes; retrieval-augmented answers restricted to your farm's documents.

Image Inspection. Photos analyzed for health score, contamination risk and growth stage, with actionable findings.

Yield Prediction. Per-batch kg forecasts, confidence scores and expected harvest dates.

Enterprise-grade platform

Tenant-isolated organizations, role-based access (Admin / Farm Manager / Worker / Viewer), MFA, Stripe subscription billing, GDPR export & deletion, background jobs, dashboards and SaaS
